

UČNI NAČRT PREDMETA / COURSE SYLLABUS	
Predmet:	OKOLJSKI MONITORING
Course title:	ENVIRONMENTAL MONITORING

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Varstvo okolja in ekotehnologije, 1. stopnja	Modul: Ugotavljanje stanja okolja	2. in 3.	/
Environmental Protection and Eco-technologies, 1 st level	Module: Determination of the state of environment	2 nd and 3 rd	/

Vrsta predmeta / Course type	Modularni predmet / Modular course
------------------------------	------------------------------------

Univerzitetna koda predmeta / University course code:	OM
---	----

Predavanja Lectures	Seminar Seminar	Sem. vaje Tutorial	Lab. vaje Laboratory work	Teren. vaje Field work	Samost. delo Individ. work	ECTS
30	/	15	/	10	90	5

Nosilec predmeta / Lecturer:	doc. dr. Samar Al Sayegh Petkovšek, prof. dr. Boštjan Pokorný / Samar Al Sayegh Petkovšek, Ph.D., Assist. Prof., Boštjan Pokorný, Ph.D, Full Prof.
------------------------------	--

Jeziki / Languages:	Predavanja / Lectures: Slovenski / Slovenian
	Vaje / Tutorial: Slovenski / Slovenian

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Pogojev ni.	No formal prerequisites.

Vsebina:	Content (Syllabus outline):
----------	-----------------------------

a) Predstavitev osnovne delitve, namena in zakonskih osnov za izvajanje okoljskih monitoringov ter evidence izvajalcev obratovalnih monitoringov (pridobivanje pooblastil).

b) Predstavitev in definicija okoljskih monitoringov glede na posamezne okoljske segmente (vode, zrak, tla) oziroma vire (hrup, sevanje):

- **vode:** obratovalni monitoring odpadnih vod za industrijske naprave, čistilne naprave in odlagališča; obratovalni monitoring stanja površinskih voda; obratovalni monitoring stanja podzemne vode;
 - **zrak:** obratovalni monitoring emisije snovi v zrak iz nepremičnih virov onesnaževanja; monitoring kakovosti zunanjega zraka; monitoring kemičnih snovi v zraku na delovnem mestu;
 - **tla:** obratovalni monitoring stanja tal;
 - **hrup:** obratovalni monitoring hrupa za vire hrupa;
 - **elektromagnetno sevanje in sevanje delcev:** monitoring radioaktivnosti; obratovalni monitoring za vire elektromagnetnega sevanja.
- c) Predstavitev biomonitoringov z uporabo bioindikatorskih organizmov in primeri biomonitoringov v vodnih ter kopenskih ekosistemih:**
- **vodni ekosistemi:** uporaba različnih vrst bioindikatorskih organizmov kot akumulacijskih bioindikatorjev (npr. ribe, makrofiti) in predstavitev vrednotenja kakovosti površinskih voda (ekološko stanje vodotokov na podlagi bioloških analiz fitobentosa, makrofitov, bentoških nevretenčarjev in rib);
 - **kopenski ekosistemi:** uporaba različnih bioindikatorskih organizmov za določitev stanja oziroma onesnaženosti okolja (npr. nevretenčarji, vretenčarji, iglice smreke, tipi ektomikorize, gozdni sadeži (trošnjaki višjih gliv, plodovi lesnatih vrst, jagodičje), drevesne branike, više rastline in lišaji).

d) Predstavitev humanega biomonitoringa, vključno z monitoringom kakovosti živil živalskega in rastlinskega izvora (zagotavljanje varne hrane).

a) Presentation of types of environmental monitorings, their purposes and legal basis for implementation; list of authorized operational monitoring providers (obtaining authorization).

b) Presentation and definition of different types of environmental monitorings according to environmental compartments (water, soil, air) and sources (noise, radiation):

- **Water:** operational wastewater monitoring for industrial plants, treatment plants and landfills; operational monitoring of the status of surface waters; operational monitoring of groundwater status.
- **Air:** operational monitoring of the emission of substances into the atmosphere from stationary pollution sources; operational monitoring of ambient air quality; monitoring of chemical substances at working place.
- **Soil:** operational monitoring of soil status.
- **Noise:** operational monitoring of noise sources
- **Radiation:** monitoring of radioactivity; operational monitoring of the sources of electromagnetic radiation.

c) Fundamentals and definition of biomonitoring, the use of bioindicator organisms and presentation of biomonitoring carried out in aquatic and terrestrial ecosystems:

- **Aquatic ecosystems:** the use of different types of bioindicator organisms as accumulative bioindicators (e.g. fish, macrophytes) and presentation of the evaluation of the surface water quality (ecological surface water status on the basis of biological analyses of phytoplankton, macrozoobenthos and fish occurrence).
- **Terrestrial ecosystems:** the use of different bioindicator organisms to determine the status or environmental contamination (e.g. invertebrates, vertebrates, spruce needles, types of mycorrhizae, forest fruits (fruits of higher fungi, wild berries and fruits of woody species), tree rings, higher plants and lichens).

d) Human biomonitoring including monitoring of the quality of foodstuffs of animal and plant origin (ensuring safe food).

Temeljna literatura in viri / Textbooks:

Obvezni: izbrani znanstveni članki, ki so dostopni na spletu:

- Pokorný, B., 2006. Retrospektivni biomonitoring onesnaženosti ekosistemov Šaleške doline s svincem in fluoridi z uporabo rogova srnjakov. Zb. Gozd. Lesar., 80: 65–80.

Priporočeni:

- Wiersma J.B., 2004. Environmental monitoring. CRC Press, USA.
- Aritola J.F., Pepper I.L. in sod., 2004. Environmental monitoring and characterization. Elsevier Academic Press, San Diego.
- Markert B.A., Breure A.M., Zechmeister H.G. (Eds), 2003. Bioindicators & biomonitoring: Principles, concepts and applications. Elsevier, Amsterdam.
- Relevantna zakonodaja (glej prilogo) / Relevant law- and bylaw documents.

Cilji in kompetence:

- seznanitev z zakonodajo, ki določa okoljske monitoringe in zavezance za izvajanje okoljskega monitoringa;
- seznanitev z metodami spremljanja stanja in onesnaženosti vodnih ter kopenskih ekosistemov (fizikalno-kemijske, biološke metode);
- poznavanja različnih vrst/tipov okoljskih monitoringov;
- poznavanje različnih vrst in nivojev bioindikacije, razumevanje prednosti uporabe posameznih vrst bioindikacije; seznanitev s principi uporabe različnih bioindikatorskih organizmov;
- poznavanje prednosti in slabosti biomonitoringa v primerjavi s kemijskimi monitoringi;
- seznanitev s primeri dobre prakse na področju izvajanja biomonitoringov;
- seznanitev z metodami izvajanja humanega biomonitoringa;
- prenos teoretičnega znanja v prakso.

Objectives and competences:

- to acquaint with legislation for implementation of environmental monitorings and subjects which are obliged to implement such monitorings;
- to acquaint with methods for monitoring the status and pollution of aquatic and terrestrial ecosystems (physico-chemical, biological methods);
- to acquire the knowledge of different types of environmental monitorings;
- to acquire the knowledge of different types and levels of biomonitoring; to understand the principles and benefits of using various types of bioindication and bioindicator organisms;
- to acquire the knowledge of the advantages of biomonitoring compared to chemical monitoring;
- to acquaint with examples of good practice in the implementation of biomonitoring;
- to acquaint with human biomonitoring and its methods;
- to transfer theoretical knowledge into the practice.

Predvideni študijski rezultati:

Intended learning outcomes:

<p>Znanje in razumevanje:</p> <ul style="list-style-type: none"> • razumevanje vrednotenja antropogenih vplivov na okolje; • razumevanje pomena izvajanja okoljskih monitoringov; • poznavanje zakonodaje, vrst in metodologije izvajanja različnih okoljskih monitoringov; • razumevanje pomena bioindikacije; • poznavanje vrst in nivojev bioindikacije; • poznavanje uporabe različnih bioindikatorskih organizmov. <p>Prenesljive/ključne spremnosti in drugi atributi:</p> <ul style="list-style-type: none"> • sposobnost uporabe relevantne nacionalne in evropske zakonodaje; • sposobnost sodelovanja pri načrtovanju in izvajanju okoljskih monitoringov; • sposobnost načrtovanja in izvedbe biomonitoringov; • sposobnost vrednotenja rezultatov in poročil okoljskih monitoringov in biomonitoringov. 	<p>Knowledge and understanding:</p> <ul style="list-style-type: none"> • understanding of evaluation of anthropogenic impacts on the environment; • understanding of the importance of implementation of environmental monitoring; • knowledge of legislation, different types and methodology of environmental monitorings; • understanding of the types and levels of biondication; • knowledge of the use of different bioindicator organisms. <p>Transferable / key skills and other attributes:</p> <ul style="list-style-type: none"> • ability to use relevant national and European legislation; • ability to participate in planning of environmental monitorings and in their implementation; • ability to prepare and implement biomonitorings • ability to evaluate the results and reports of environmental monitorings and biomonitorings.
